JUVENILE-COURT STATISTICS AND FEDERAL JUVENILE OFFENDERS, 19331

SOURCE OF INFORMATION

This report for the calendar year 1933 includes the seventh annual report on juvenile-court statistics and the second report 18 on Federal juvenile offenders. Part I, Juvenile-Court Statistics, is based on juvenile-court reports supplied by individual courts and by State departments dealing with juvenile-court and probation work that cooperate with the Children's Bureau by supplying information on juvenile delinquency, dependency and neglect, and children's cases

of other types dealt with by juvenile courts.

Part II, Federal Juvenile Offenders, presents information on juveniles who violate Federal laws and come to the attention of Federal authorities. Statistics of Federal juvenile offenders have been compiled from records on file in the Bureau of Prisons of the United States Department of Justice. The tabulation and analysis of these data constitute one aspect of the cooperation that has been developed in making effective the policy enunciated by the Attorney General and authorized by act of Congress approved June 11, 1932,2 which made possible the transfer of jurisdiction over juveniles from Federal to State authorities whenever investigation by the Department of Justice indicated that such transfer would be to the best interest of the United States and the juvenile offender.

¹ Material compiled under the general supervision of Dr. Elizabeth C. Tandy, Director of the Statistical Division of the Children's Bureau, who has also written the report.

^{1a} The first report on Federal Juvenile Offenders covered the period from July 1 to Dec. 31, 1932, and was included in Juvenile-Court Statistics and Federal Juvenile Offenders, 1932 (U. S. Children's Bureau Publication No. 226, Washington, 1935).

² The law provides that United States attorneys may forego prosecution and surrender any person under all years of are arrested for a Federal offense after investigation by the Department of Justice, if "it shall

²¹ years of age arrested for a Federal offense, after investigation by the Department of Justice, if "it shall appear that such person has committed a criminal offense or is a delinquent under the laws of any State that can and will assume jurisdiction over such juvenile and will take him into custody and deal with him according to the laws of such State, and that it will be to the best interest of the United States and of the juvenile offender to surrender the offender to the authorities of such State." (47 Stat. 301; Supp. VI to U. S. Code, title 18, sec. 662a.) 1

Part I—JUVENILE-COURT STATISTICS, 1933

DEVELOPMENT OF STATISTICAL REPORTING

The Cooperating Courts.

The report on juvenile-court statistics for 1933 includes reports from the juvenile courts of 4 entire States—Connecticut, Massachusetts, Rhode Island, and Utah—from areas of New Jersey and New York comprising 84 and 91 percent, respectively, of the population of those States, from 44 courts in 20 other States, and from the District of Columbia. In all, reports from 284 courts are included. Eighty of the courts serve areas of 100,000 or more population and 204 serve less populous districts. The area served by the courts for which reports are received includes roughly 38,000,000 inhabitants, or 30 percent of the population of the United States.

The geographic distribution of the courts included in the 1933 report is shown in the accompanying map (p. IV). Most of the courts are in States east of the Mississippi River but the States immediately west of the Mississippi are represented by six courts, and courts in all States on the western coast are included. The courts in Denver and the entire State of Utah give representation to the

Mountain Division.

The information for 1933 is drawn from the records of 107,764 cases of juveniles dealt with by these 284 courts. These cases include 68,039 delinquency cases, 21,605 dependency and neglect cases, and 1,192 cases of special proceedings.³ The statistics presented also include 16,928 cases of children discharged from probation or super-

vision during the year.

These records of cases of juveniles are reported to the Children's Bureau under two systems—directly by individual courts and under a State-wide system. Courts cooperating individually send to the Bureau a card for each case disposed of by the court during the year. These cards are tabulated in the Bureau, and tables showing all the essential facts for the cases are returned to the court. Under the State-wide system the courts furnish the State welfare department or other State agency in charge of juvenile-court work or probation service with information regarding their cases, and the State office consolidates the material and supplies the Children's Bureau with an annual report for each court in the State. Much more detailed information regarding cases is obtainable under the system of reporting by individual courts than under the State-wide plan.

For each of the 7 years during which the plan for promoting and assembling uniform statistics has been in operation, the number of courts reporting, the number of States represented, and the population included in the reporting areas are shown in tables A, B, and C. The number of cases of the various types reported by the courts each

year appear in table D.

³ Special-proceedings cases include those involving provision for the care of feeble-minded children, children dealt with as material witnesses, adoption proceedings, proceedings concerning the custody or guardianship of children, and certain other types. (See table 28, p. 42.)

¹ Special-proceedings cases were not reported prior to 1930. They include cases of petitions for commitment of feeble-minded children, adoption cases, controversies regarding custody of a child, children held as material witnesses, and certain other types.

² Exclusive of New York City, for which a complete report was not available.

State-Wide Reporting.

The early plan for the collection of juvenile-court statistics on a Nation-wide scale was based on reports from individual courts. Many of the States had provision by statute for reports from the courts to a State welfare department or other State agency concerned with juvenile-court or probation work. In the first years of the activity many State departments undertook to stimulate the interest of judges and probation officers in the plan for Nation-wide statistics and to urge the direct cooperation of the individual courts with the Children's Bureau. The inclusion in the first year (1927) of the District of Columbia and 42 courts situated in 15 States and serving areas comprising 15 percent of the population of the United States is direct evidence of immediate enthusiasm and interest on the part of both the State departments and the courts.

¹ Estimated as of July 1.2 According to the 1930 census.

All the reports for 1927 were received through direct cooperation with individual courts. Through the interest of the Juvenile Court Commission the entire State of Utah was included as early as 1928, the commission sending in a card for each case dealt with by the courts. Connecticut in 1931 was the first State to report on summary forms through a State agency to the Children's Bureau. Massachusetts and New York ⁴ began reporting under the State-wide plan in 1932, and New Jersey and Rhode Island were added in 1933.

Reports From Individual Courts.

In the early years of the activity individual courts were admitted to the reporting area without regard to the size of the community served. As the program developed, however, the expense of direct Federal contact with small courts handling only a few children's cases during the year came to be disproportionately great, and the policy was adopted of gradually limiting direct reports to the Children's Bureau to courts serving areas of 100,000 or more population. Only a few courts serving areas with less than 100,000 population in States other than those reporting on a State-wide basis are still included under the individual plan. These are courts which are expected to be included under State-wide reporting at an early date or in which other special circumstances exist. Practically all the new courts admitted on the individual basis in recent years have been courts that serve areas with 100,000 or more population and that are not in States reporting on a State-wide basis.

On account of the desirability of detailed information obtainable only through cooperation with individual courts and the necessity of having records over a period of years for the study of trends in juvenile delinquency, much effort has been directed toward the continuance of the cooperative relationship with all courts serving areas with 100,000 or more population that began reporting in the early years. Changing conditions within the courts have often made this difficult, but reports are available for 18 courts for the entire period, 1927–33, for 25 courts for 1928–33, and for 30 courts for 1929–33. This continuation of direct cooperation is evidence not only of the desire of the courts to maintain the Federal relationship but also of the realization by the communities of the necessity for a statistical basis for planning and carrying on activities for the protection of children.

TRENDS IN JUVENILE DELINQUENCY RATES

These rates are essentially a direct expression of the amount of delinquency dealt with by the courts that was brought to their attention by individuals and organizations concerned with the welfare and protection of both the children and the community. The rates of the courts are determined not only by the amount of delinquency in the respective communities served, but also by the policies of the police department and other agencies in referring cases to the courts, the intake procedure of the courts—particularly the extent to which they undertake to deal with minor cases—the relationship of the courts to other agencies in the community, and the extent to which the community provides services for children which tend to reduce the necessity for court action. The number of boys and of girls dealt with in delinquency cases per 10,000 children of the same

⁴ Exclusive of New York City which sends cards for individual cases directly to the Children's Bureau.

sex and of juvenile-court age is shown by groups of courts in table E and by individual courts in table F for the years during which the courts have sent reports to the Children's Bureau.

Delinquency Rates for Boys and for Girls.

In 1933 the trend of juvenile delinquency rates for both boys and girls in courts serving areas with 100,000 or more population continued downward. These decreases continued a tendency definitely established by 1931. Decreases in the rates from 1932 to 1933 appeared for both sexes in the 18 courts reporting throughout the period 1927-33, the 25 courts reporting for 1928-33, the 30 courts reporting for 1929-33, and the 35 courts reporting for 1930-33. In the groups of courts for which figures are available prior to 1929 the rates had an upward tendency in the early years, the maximum being attained in either 1929 or 1930. The percentage decreases in the 1933 rates from the maximum rates of 1929 or 1930 vary in the groups of courts from 11 to 15 percent for boys and from 27 to 32 percent for girls.

Table E.—Juvenile delinquency rates per 10,000 boys and girls of juvenile-court age dealt with by courts that served areas with 100,000 or more population 1 and that reported throughout specified periods

			Ju	venile delir	nquency rat	tes		
Year	18 courts 1927		25 courts 1928	reporting 8-33	30 courts 1929	reporting 9-33	35 courts 1930	reporting 0-33
	Boys	Girls ²	Boys	Girls 3	Boys	Girls	Boys	Girls
1927	162 174 183 184 172 162 156	31 33 34 34 30 25 24	164 172 170 159 149 146	32 34 33 29 25 24	177 177 166 154 151	38 37 32 28 26	186 180 169 165	37 33 29 27

Although some variation appears, the trend in the rates of the individual courts from year to year (table F) is, in general, the same as that in the groups of courts for which the rates have been discussed. The rates of many of the individual courts show an upward trend prior to 1929 or 1930 and a downward tendency since that time. This decrease continued in 1933, and as compared with 1932, is shown in the rates for boys by 22 of the 41 courts cooperating in both years. Sixteen courts, however, had higher rates in 1933 than in 1932 and 3 courts had identical figures for the 2 years. Statistical study of the differences in the rates for boys in connection with the number of boys of juvenile-court age in the areas shows that the rates for boys in 4 courts were significantly higher in 1933 than in 1932; that the rates of 26 courts maintained approximately the same level during the 2 years; and that the rates of 11 courts were sufficiently lower to indicate a real decrease in the amount of delinquency among boys coming to court attention. The four courts that showed statistically significant increases in the rates for boys were Lake County, Ind.; Polk County, Iowa; Mercer County, N. J.; 5 and Multnomah County, Oreg. Those showing significant decreases for boys were San Diego

According to the 1930 census.
 Only 17 courts reported girls' cases.
 Only 24 courts reported girls' cases.

⁵The Mercer County, N. J., court included dismissed cases in its 1933 report. These had not been included in the report for 1932 or other previous years.

County, Calif.; Bridgeport, Conn.; District of Columbia; Dade County, Fla.; Fulton County, Ga.; Kent County, Mich.; Hudson County, N. J.; Erie and Rensselaer Counties, N. Y.; Hamilton and

Mahoning Counties, Ohio.

Comparison of the rates for girls in 1933 with those for 1932 shows 21 courts with numerical decreases, 6 with identical figures for the 2 years, and 14 with increases. Only two courts—Mobile County, Ala., and Syracuse, N. Y.—had significant increases in their rates for girls, whereas significant decreases are found in the rates for seven courts: Lake County, Ind.; Kent and Wayne Counties, Mich.; Montgomery County, Ohio; Berks County, Pa.; Pierce County, Wash.; and Mil-

waukee County, Wis.

The delinquency rates for boys and for girls, as table F shows, vary widely from community to community. In 1933 the rates for boys varied from 507 per 10,000 boys in Norfolk, Va., to 29 in Montgomery County, Pa., the rate of Kent County, Mich., occupying the middle position with a rate of 152. Rates for girls varied similarly, but within a narrower range, the maximum, 98, occurring in Denver, Colo., and the minimum, 1 per 10,000 girls of juvenile-court age, in Montgomery and Berks Counties, Pa. Hennepin County, Minn., occupied the midway position with a rate of 32.

Table F.—Juvenile delinquency rates per 10,000 boys and girls of juvenile-court age dealt with by courts that served areas with 100,000 or more population 1 and that cooperated in 1933; 1927–33

Delinquency Rates for White and for Negro Children.

In courts that serve areas having a large number of Negroes the racial constitution of the population of the area is of importance in connection with the work of the court. The number of white and Negro boys and girls dealt with in delinquency cases per 10,000 children of juvenile-court age and of the same race and sex is shown by groups of courts in table G and by individual courts in table H for the years of the period 1927–33 during which the courts have cooperated with the Children's Bureau. The courts included in these tables are those serving areas of 100,000 or more total population and 10,000 or more Negro population. The tables show that the rates for both Negro boys and Negro girls dealt with in delinquency cases are in practically all instances markedly higher than those for white children of the same sex.

Table G.—Juvenile delinquency rates per 10,000 white and Negro boys and girls of juvenile-court age dealt with by courts that served areas with 100,000 or more total population and 10,000 or more Negro population 1 and that reported throughout specified periods

According to the 1930 census.
 Rate not computed because the ages of the majority of children were not reported.
 Rate not computed because number of Negro delinquent children was not reported.
 Based on official cases only, because unofficial cases were not reported in previous years.

In the 14 courts reporting throughout the period 1927–33 the maximum rates for both white and Negro boys and white girls were those for 1929 or 1930 (table G). For Negro girls the highest rate was in 1927. From 1930 through 1933 the rates for white boys and girls and the rates from 1929 for Negro girls show continuous decreases. The rates for Negro boys similarly show a decline from 1929 through 1932, but the 1933 rate is higher than that of the previous year.

In the group of 19 courts cooperating for 1929–33 and in the group of 22 courts reporting for 1930–33, the maximum rates were likewise those for 1929 or 1930, and from this time on through 1933 decreases similarly appear each year in the rates for white boys and girls and Negro girls. Among Negro boys in the group of 19 courts decreases are shown from the year of the maximum, 1929, only through 1932.

In the 22 courts the 1931 rate for Negro boys was lower than the maximum, 1930, but the 1932 rate was a few points higher than that of the previous year. The 1933 rates for Negro boys exceeded the 1932 figures by 2 percent in each group of cooperating courts. This increase in the rate for Negro boys in each group of courts is not of

sufficient magnitude to be statistically significant.

In 20 of the 24 individual courts reporting in both 1932 and 1933 no statistically significant differences appear in the rates for Negro boys in the 2 years and only three courts—Mobile County, Ala.; Baltimore, Md.; and New York City—show definitely increased rates for 1933. Only one court, the District of Columbia, had a statistically significant decrease in the rate. In contrast with this lack of significant change in the rates of most courts for Negro boys, eight courts showed significant decreases in the rates for white boys: District of Columbia; Dade County, Fla.; Fulton County, Ga.; Baltimore, Md.; Hudson County, N. J.; Erie County, N. Y.; Hamilton and Mahoning Counties, Ohio. Only two courts—Lake County, Ind., and Mercer County, N. J.—show significant increases for white boys.

As table H shows, the rates for white and Negro boys and girls varied widely from court to court. The maximum rate in 1933 for white boys, 415, appears in Mahoning County, Ohio, and the minimum, 26, in Montgomery County, Pa. The maximum for Negro boys, 962, was in Baltimore, Md., and the minimum, 74, in Lake County, Ind. The rates for white girls varied from 75 in Mahoning County, Ohio, to 6 in Allegheny County, Pa. Rates for Negro girls varied from 204 in Mahoning County, Ohio, to 12 in Greenville

County, S. C.

Age Under Which Juvenile Court Has Original Jurisdiction.

As has been pointed out earlier, the character of the community services available to children and the policies of the courts and other agencies markedly affect the rates. In juvenile delinquency rates the age of original juvenile-court jurisdiction is an important factor. The age of original jurisdiction of a court is established by State law and is, in most instances, uniform throughout a State, although for a few courts a different maximum age of jurisdiction has been set by special provision at a higher or lower level than that of the State as a whole. Among the 43 courts that serve areas with 100,000 or more population and that reported individually in 1933, 21 have jurisdiction under 16 years, 6 have jurisdiction under 17 years, 14 have jurisdiction

under 18 years, and 2 have jurisdiction over all persons under 21 years of age. Table I shows the juvenile delinquency rates for boys and for girls of all ages and for those 7 to 15 years of age for all courts with jurisdiction beyond the sixteenth birthday, and by race for courts that serve areas with 10,000 or more Negroes in the total

The rates in table I for children 7 to 15 years of age are comparable with respect to age with the rates for courts having jurisdiction under 16 years 6 that appear in tables F and H. Wide variation is shown in the rates for children 7 to 15 years of age appearing before courts that have jurisdiction beyond the sixteenth birthday and also in the total rates for courts that have original jurisdiction only up to the sixteenth birthday. In the courts with jurisdiction after the sixteenth birthday the juvenile delinquency rates both for boys and for girls 7 to 15 years old are invariably lower than the rates for boys and girls of all ages within the court's jurisdiction. In courts having 10,000 or more Negroes in the population the same situation appears among white and Negro boys and girls.

Table I.—Age under which juvenile court has original jurisdiction and juvenile delinquency rates per 10,000 white and Negro boys and girls of juvenile-court age and of 7 to 15 years of age dealt with by courts that had jurisdiction beyond the sixteenth birthday and that served areas with 100,000 or more population in 1933 1

Summary.

Juvenile delinquency rates are a direct expression of the amount of work done by the courts with children of juvenile-court age referred to court on delinquency charges. They are not an expression of the total amount of delinquency in the community because many agencies work with children who present problems of delinquency, and the number of children brought to the court depends on the work of organizations assisting with the problems and the attitude of the community toward both the organizations and the court. The rates also depend unquestionably on the service the court gives to children who are brought to its attention.

The delinquency rates vary within a wide range. Part of the variation is due to composition of the community with respect to race, part is due to the difference in maximum age of the children over

whom the court has original jurisdiction.

The decreases in delinquency rates for boys and girls in 1933 as compared with 1932 are a continuation of a general downward trend that has been apparent for the last few years. For each of the three groups of courts that have cooperated with the Children's Bureau for periods of varying length, reductions appeared in the rates for white

boys, for white girls, and for Negro girls in 1933 as compared with 1932, but for Negro boys an increase in the rate for all the groups of courts was apparent. This increase, however, is not sufficient to be statistically significant.

TRENDS IN DELINQUENCY CASES

Delinquency Cases and Number of Children.

For the 30 courts serving areas of 100,000 or more population which reported delinquency cases in each year of the period 1929–33, the number of delinquency cases disposed of, the number of children dealt with in these cases, and the number of children dealt with in each 100 delinquency cases are shown by sex in table J. There was little variation in the number of boys and girls per 100 cases during the years under review. The number of boys per 100 boys' cases varied only from 83 to 85 and the number of girls per 100 girls' cases, only from 89 to 91. This smaller ratio of boys than of girls dealt with shows greater recidivism among boys; in other words, boys were dealt with more frequently than girls in two or more cases during the year.

Table J.—Number of boys and girls dealt with in delinquency cases disposed of by 30 courts that reported throughout the period 1929-33

Number of Cases Disposed of.

In this section on trends in delinquency cases, the cases disposed of are analyzed by age and sex of child dealt with, parental status, reason for reference to court, place of care pending hearing or disposition, and disposition for 30 courts serving areas of 100,000 or more population which cooperated with the Children's Bureau throughout the 5-year period 1929–33. The number of cases disposed of in each year of the period and the percentage change in 1933 as compared with 1932 and 1929 are presented for the group of 30 courts and for the individual courts comprising the group (table K). The year 1929 has been shown to be a year of relatively high delinquency. It is the year used as a base in the study of change in other types of social statistics compiled by the Children's Bureau.

In this group of courts the number of boys' cases disposed of in 1933 (28,885) was approximately the same as in 1932 (28,767) but was 8 percent less than the number disposed of in 1929 (31,348). The number of girls' cases disposed of in 1933 (4,678) was 5 percent less than the number in 1932 (4,940) and 27 percent less than the number in 1929 (6,383). The total number of cases disposed of by these courts in 1933 (33,563) was little different from the total in 1932 (33,707) but was 11 percent less than the number in 1929

(37,731). It is of interest to note that the girls' cases not only have become fewer in number but constitute a smaller percentage of the total than in earlier years. Whereas girls' cases constituted 17 percent of the total cases disposed of in 1929, they constituted only 15 percent in 1932, and only 14 percent in 1933. These reductions are of social as well as statistical significance.

The changes in the number of cases disposed of in this group of courts as a whole reflect the general changes in the policies of the courts themselves, the attitudes of other community agencies with respect to referring children to court, and the amount of community provision for the care of children who become delinquent. study of the changes in this group of courts, however, it must be constantly kept in mind that many courts deal with relatively few cases and that the policies of the courts dealing with larger numbers greatly influence the totals for the group of 30 courts. New York, for instance, disposed of 7,727 cases and Philadelphia 6,787 cases during 1933. Hamilton County, Ohio, the next on the list, disposed of 2,298. At the other end of the scale is Montgomery County, Pa., which disposed of only 80 cases. Five courts disposed of 100 but less than 200 cases. In all, 15 courts reported less than 500 cases; 8 courts, 500 but less than 1,000; and 7 courts, more than 1,000.

Table K shows for the individual courts the number of cases disposed of in each year of the period under review and the percentage change in 1933 as compared with 1929 and 1932. The total number of cases disposed of by a court is of great importance in connection with the study of annual changes in the figures of the individual courts. In courts reporting large numbers of cases the differences in the annual figures may indicate general change in the community situation or court procedure. In courts reporting small numbers, however, the total number of cases disposed of may vary greatly without indicating a real change in underlying factors.

Ages of Boys and Girls.

There was little difference in the age distribution of the boys appearing in delinquency cases in the group of 30 courts in 1933 as compared with 1932 (table L). As compared with 1929, however, there was a slightly smaller percentage of cases of boys under 16 years in 1933 and a slightly larger proportion 16 years and over. The reductions in the number of girls' cases during these years have been fairly evenly distributed throughout the age periods, although, as with boys, the percentage under 16 was slightly smaller in 1933 than in 1929.

Table K.—Number of boys' and girls' delinquency cases disposed of, and percentage change in 1933 as compared with 1932 and 1929; cases disposed of by 30 courts that served specified areas and that reported throughout the period 1929-33

Home Conditions.

The number of cases in which the children were living in homes of normal composition and the number living in broken homes are shown in table M. Information as to place the child was living when referred to court was more nearly complete in 1930 than in 1929, and this improvement in reporting was maintained through 1933. In 92 percent of the cases for which the information was obtained each year the children were living in their own homes and in 64 percent of

the cases both their own parents were present. The percentage changes in 1933 as compared with 1932 in the number of delinquency cases associated with most types of home conditions, showed slight increases, which were largely due to the improvement in reporting. Decreases in 1933 as compared with 1932 were shown in the number of cases in which the mother was dead, cases in which the parents were divorced, and cases in which the child was living in another place than his own home. Increases appeared in all other types of home conditions. Decreases in the number of cases in 1933 as compared with 1929 were shown for every type of home condition except that in which the father was dead, the parents not married to each other, the parents were living apart for reasons other than divorce or desertion or for reasons not specified, and where the child was living in a place other than his own home. The most important numerical decreases were in cases in which the child was living with one parent and one stepparent and cases in which the mother was dead.

Reasons for Reference to Court.

The reasons for referring delinquency cases to court are shown in The reasons for reference of boys' cases and girls' cases differ markedly. Boys' cases were most frequently referred on account of stealing, and acts of carelessness or mischief and traffic violations. These two types of offenses accounted for practically three-fourths of the boys' cases in each year of the period under review. In 1933 stealing was the reason for referring 40 percent of the boys' cases, and acts of carelessness or mischief and traffic violations were the reason for referring 34 percent. Running away and being ungovernable each accounted for 6 percent of the boys' cases and truancy 5 percent. Only 2 percent of the boys' cases were referred on account of sex offenses. In contrast to this situation among boys, practically three-fourths of the girls' cases were referred on account of being ungovernable, sex offenses, running away, and truancy—offenses which will be recognized as being closely allied. Stealing was the reason for reference in 11 percent of the girls' cases and acts of carelessness in 10 percent.

Among boys the most important changes in 1933 as compared with 1932 were the reduction in the number of cases referred on account of running away (10 percent) and the increase in truancy cases (5 percent). Running away was given as the reason for reference more frequently in 1931 than in any other year. In 1933 the number of cases of this type was 19 percent less than in 1931. The increase in truancy cases in 1933, though slight, was an interruption of the general downward trend. The 1933 figure, however, was not so great

as that of any year prior to 1932.

Among girls' cases marked variability in the number of cases referred for the various reasons is associated partly with the small number of cases. The number of cases of truancy increased in 1933 as compared with 1932, cases of sex offenses and running away were less frequently reported, and the charge of being ungovernable was reported in approximately the same number of cases as in the previous year.

¹ Includes only official cases for Franklin County, Ohio, and Pierce County, Wash., because these courts did not report unofficial cases every year.

² Less than 1 percent.

Table O shows the most frequent types of reason for reference for boys' cases during the period under review for each of the 30 cooperating courts. The number of girls' cases referred for the different reasons was very small and tends to indicate variability rather than real change in the individual courts.

Place of Detention Care.

In each of the last 3 years of the period under review in slightly more than one-third of the boys' cases and about half of the girls' cases the children were detained overnight or longer, as is shown in table P. The place of care most frequently used for both boys and girls was the detention home. Other institutions stood second in importance. Jails and police stations stood third for boys but were seldom used for girls. Boarding or other family homes were used infrequently for either boys or girls. Boys were detained in about the same number of cases in 1933 as in 1932, but the cases in which girls were detained decreased The use of detention homes for the care of boys increased in 1933 as compared with 1932. Decreases are noted in the use of other institutions and of jails and police stations. Both improvement in the completeness of reporting and changes in the policies of the individual courts are reflected in the figures.

Table O.—Number of boys' delinquency cases, referred for specified reasons, disposed of by 30 courts that served specified areas and that the period 1929-33

¹ Includes only official cases for Franklin County, Ohio, and Pierce County, Wash., because these courts did not report unofficial cases every year.

² Less than 1 percent.

3 Includes cases of children cared for part of the time in detention homes and part of the time elsewhere, but excludes cases of children also held in jails or police stations.

4 Includes a few cases of children cared for part of the time in jails or police stations and part of the time

elsewhere.

⁵ Includes a few cases of children held in more than 1 place of care but in places other than detention homes,

jails, or police stations.

⁶ Not shown because number of cases was less than 50 in 1932.

Table Q shows by individual courts the place of care of the children involved in delinquency cases during the years 1929 to 1933. types of places used show the policies of the courts and the amount of community provision for care. Neither Hennepin nor Ramsey County, Minn., for instance, has a detention home, and many of the children who might have been cared for in detention homes in these counties have been placed in boarding homes or in other institutions. Bridgeport, Conn., has had detention-home facilities since 1930 and has used this type of care mainly since 1931. In Erie County, N. Y., the detention home used by the Buffalo court prior to the consolidation of the city and county courts was closed, and boarding homes were used in 1932 and 1933. The other courts in New York State almost invariably used other institutions for the care of the children. decreases noted during the period 1929-33 in the total number of cases detained in jails and police stations arose mainly from the less frequent use of such places by the courts of Mahoning County, Ohio; Hennepin County, Minn.; and Norfolk, Va.

¹ Includes cases of children cared for part of the time in detention homes and part of the time elsewhere, but excludes cases of children also held in jails or police stations and part of the time elsewhere.

³ Includes only official cases because court did not report unofficial cases every year.

Disposition of Cases.

Changes in the disposition of delinquency cases are shown for the group of 30 courts in table R and for the individual courts in table S. The increase in both boys' and girls' cases dismissed or adjusted in 1933 as compared with 1932 arose largely from the greater frequency of this type of disposition in New York City and Philadelphia, but 10 other courts also show increases in the number of dismissals in 1933 as compared with 1932. This is the only type of disposition which shows a marked increase in the group of 30 courts for both boys' and girls' cases in 1933. A slight increase is shown in the number of cases of boys committed or referred to an agency or individual, but a decrease is shown for girls' cases. Relatively important types of disposition which show decreases for both boys' and girls' cases are probation and commitment or reference to institutions. Decrease in both of these types of disposition is shown in many of the individual courts.

Table R.—Disposition of case and percentage change in 1933 as compared with 1932 and 1929; boys' and girls' delinquency cases disposed of by 30 courts that reported throughout the period 1929-33 1

² Includes only official cases because court did not report unofficial cases every year.

TRENDS IN DEPENDENCY AND NEGLECT CASES

Twenty-eight courts have reported dependency and neglect cases throughout the period 1929–33. The number of dependency and neglect cases and the percentage change in each year as compared with the preceding year in cases disposed of by these 28 courts were as follows:

Year	Number	Percent increase (+) or decrease (-) ascompared with preceding year	Year	Number	Percent increase (+) or decrease (-) as compared with preceding year
1929 1930 1931	14, 863 15, 012 14, 473	+1 -4	1932 1933	13, 188 12, 810	-9 -3

In 1930 more cases of dependency and neglect were disposed of by these 28 courts than in 1929, but in each year since 1930 the number has been fewer than in the preceding year. Fewer cases were disposed of in 1933 than in any other year of the reporting period. The drop from 1932 to 1933 amounted to 3 percent and from 1929 to 1933 to 14 percent. This decrease in the number of cases in 1933 as compared with 1929 appeared in 19 of the 28 individual courts reporting throughout the period (table T). Fourteen of the twenty-five courts that reported 50 or more cases in 1932 showed decreases in the number of cases disposed of in 1933. The greatest increase in number of cases appeared in Multnomah County, Oreg., which disposed of 685 cases in 1933 as compared with 423 cases in 1932. The number of cases disposed of in the court of Greenville County, S. C., increased 64 percent, but there were comparatively few cases in each year (53 in 1932 and 87 in 1933).

The factors responsible for the decrease in dependency and neglect cases handled by the courts in 1933 are probably in general the same that have been in operation in the last few years; namely, the greater availability of direct and work relief for families, the growing tendency to provide social treatment for cases of dependency and neglect without recourse to court, and, in some communities at least, decreases in budgets of courts, agencies, and institutions. In some cases, children were probably not referred to the court because it was known that money was not available for care outside the home. Furthermore, under the pressure of heavy case loads some situations involving neglect are being overlooked which in normal times would be brought to the attention of the courts. Doubtless also many families are being kept together that would have been broken up except for the funds that have come into the communities in the form of direct relief and public works.

Tables U, V, and W show the age distribution of the children, the marital status of the parents and the place where child was living when referred to court, and the disposition of the cases for the group of 28 courts during the period 1929–33. Table X shows the number of cases of children committed or referred to institutions, agencies, or individuals by each of the courts during the period under review.

¹ Of the 255 courts reporting delinquency cases, 246 reported boys' cases and 226 reported girls' cases.
² Some courts have jurisdiction under special circumstances beyond the age specified; also courts occasionally deal informally with children who are just beyond the age of juvenile-court jurisdiction.

³ Not separately reported.

Part II—FEDERAL JUVENILE OFFENDERS, 1933

SOURCE OF INFORMATION

This report for 1933 on Federal juvenile offenders is the first report covering the cases of juveniles who violated Federal laws that were disposed of during an entire calendar year by Federal authorities. Prior to July 1932 the statistics of such cases were limited to special studies and a few counts made from records of cases of juveniles in the Bureau of Prisons of the Department of Justice filed with the records of cases of adults who had been arrested by Federal authorities. The first comprehensive Nation-wide statistics based on records from the juvenile index file established in the Bureau of Prisons covered the period July 1 to December 31, 1932, and included all cases of offenders under 19 years of age disposed of by Federal authorities. The statistics for 1933 are also based on records of cases of Federal juvenile offenders under 19 years of age that appear in the juvenile index file and that were disposed of during the year. These statistics are compiled and published by the Children's Bureau as part of its cooperation with the Department of Justice in furthering that Department's program for the treatment of Federal juvenile offenders according to juvenile-court principles, including the transfer of such offenders to the jurisdiction of State authorities when such transfer is to the best interest of the juvenile and the Federal Government.

CASES REPORTED IN 1933 AND LAST 6 MONTHS OF 1932

Number of Cases.

During the year 1933, 2,106 cases of juveniles under the age of 19 years, of which 1,969 were boys' cases and 137 were girls' cases, were disposed of by Federal authorities after arrest on charges of violation of Federal laws. They include cases referred from all the 48 States and from Alaska and Puerto Rico.² They do not include such cases in the District of Columbia.3 The number of cases disposed of by each State and by Alaska and Puerto Rico in the three 6-month periods between July 1, 1932, and December 31, 1933, and in the calendar year 1933 is shown in table A. From this area 1,310 cases were disposed of between January 1 and June 30, 1933, and 796 between July 1 and December 31, 1933. These numbers may be compared with 1,168 cases disposed of in the last 6 months of 1932.

During these 18 months there were several factors that might be expected to influence the statistics. Significant changes in policies regarding prohibition occurred during the period, and the eighteenth amendment to the Constitution was repealed in November 1933. Immigration policies were modified in the direction of greater consideration of individual circumstances. Another factor was the work done by the Bureau of Prisons and the Children's Bureau in

¹ Juvenile-Court Statistics and Federal Juvenile Offenders, 1932. U. S. Children's Bureau Publication No. 226. Washington, 1935.

² In the tables the word "State" includes Alaska and Puerto Rico.

³ In the District of Columbia all courts are Federal, but their administrative relation to the Department of Justice differs from that of other Federal courts.

developing the policy of the Department of Justice that Federal juvenile offenders should be treated in accordance with juvenile-court principles.

Geographic Distribution.

The cases of Federal juvenile offenders came particularly from the Sixty-six percent of the cases disposed of between July 1 and December 31, 1932, 73 percent between January 1 and June 30, 1933, and 59 percent between July 1 and December 31, 1933, were from the three southern divisions, which contain only 30 percent of the total population of the United States. In the South, too, the greatest variation appears in the number of cases disposed of in the three 6-month periods. The 950 cases disposed of between January and June 1933 constitute an increase of 24 percent over the 767 cases disposed of during the last 6 months of 1932. But only 468 cases were disposed of in the South between July and December 1933; this is 51 percent less than the number disposed of in the first 6 months of 1933 and 39 percent less than the number disposed of in the last 6 months of 1932. The number of cases disposed of in the four northern divisions was relatively small in proportion to the population, whereas in the two western divisions it was in about the same proportion as the population. In each of the three southern divisions the number of cases disposed of between January and June 1933 was greater than the number disposed of during the preceding 6 months. In two of the northern divisions and in one western division the number of cases was somewhat smaller during this period than during the preceding 6 months. In all but two divisions of the country there were fewer cases in the last 6 months of 1933 than in either of the preceding 6-month periods (table B).

¹ Exclusive of the District of Columbia.

² Less than 1 percent.

Sex, Race, and Age of Offenders.

The great majority of the Federal juvenile offenders are boys. During 1933 girls' cases represented only 7 percent of the total. Approximately two-thirds of both boys and girls who came to the attention of Federal authorities during the year were white. Among the boys' cases, Negro and Mexican boys were represented in equal proportions (15 percent), whereas of the girls' cases 6 percent were of Negro girls and 18 percent were of Mexican girls (table C). Of the 325 cases of Mexican juvenile offenders 15 were disposed of in New Mexico, 37 in Arizona, and 265 in Texas. In the great majority of cases involving Mexican children the arrests had been made on account of violations of the Immigration Act.

Young children were dealt with infrequently. Approximately half of both boys and girls—49 and 48 percent, respectively—were 18 years of age; 17-year-old children were involved in 29 percent of the boys' and 26 percent of the girls' cases during 1933. A larger proportion of boys under 17 (26 percent) were involved in cases during the last 6 months of 1933 than in either of the preceding 6-month periods (19 percent in the first 6 months of 1933 and 20 percent in the last 6 months of 1932). The age distribution of the girls is variable owing to the small number of cases disposed of (table D).

Frequently an offense which is a violation of a Federal law also

constitutes an act of juvenile delinquency under the State law. In many communities minor violations of Federal laws, and sometimes even serious violations, are dealt with by the juvenile court. During 1933 children of juvenile-court ages were involved in 25 percent of the total cases of Federal juvenile offenders—16 percent of the cases disposed of in the Northern States, 23 percent of the cases in the Southern States, and 64 percent of the cases in the Western States. (See table E.) The relative frequency of cases of children of juvenile-court age dealt with by Federal courts in the different sections of the country is associated with the age jurisdiction of the juvenile courts established under State law, the community attitude toward reference to juvenile rather than Federal courts, and the degree of development of the State facilities for juvenile-court and probation work.

Place of Arrest-Home State or Contiguous State.

Most of the arrests were made in the States in which the juveniles were resident. Only 24 percent of the boys and 35 percent of the girls dealt with in 1933 for whom place of arrest was reported were arrested outside their home States. The number of boys and girls arrested in their own home States and elsewhere were:

Place of arrest	Boys' cases	Girls' cases

¹ Includes Indiana, where the age limit was 18 for girls.
² Includes Illinois, where the age limit was 18 for girls.
³ In Maine, Wyoming, and Alaska there are no juvenile-court laws but certain special procedures are

provided.

4 Includes Maryland, where the age limit in Baltimore city and in counties having special "magistrates for juvenile causes" was 16 years; where a circuit-court judge is designated, the limit was under 18 years for girls and under 20 years for boys; elsewhere there was no provision.

5 Includes Delaware, Kentucky, and Texas where the age limit was 18 for girls.

Offense Charged or Reason for Arrest.

Violation of the liquor laws was the most frequent cause for arrest of juvenile offenders in 1933, as well as in the last half of 1932. During the year 1933 the offense charged or reason for arrest was violation of the liquor laws in 49 percent of the cases; Immigration Act in 16 percent; and the Motor Vehicle Theft Act in 11 percent. lations of other types of laws accounted for relatively few cases during the year. Violation of the liquor laws was charged in 49 percent of the cases disposed of in the last half of 1932, in 55 percent of those disposed of during the first half of 1933, and in 40 percent of those disposed of during the last half of 1933. During the last 6 months of 1932 violations of the Motor Vehicle Theft Act and the Immigration Act constituted 16 and 15 percent, respectively, of the cases for which type of offense was reported, but in both periods of 1933 violations of the Immigration Act were more numerous than those of the Motor Vehicle Theft Act. Violation of the Immigration Act was charged in 16 percent of the cases disposed of from January to June and 17 percent of those disposed of from July to December 1933, whereas violations of the Motor Vehicle Theft Act accounted for 10 and 12 percent, respectively, in these periods. Violation of the postal laws was charged in 5 to 8 percent of the cases in each of No other type of violation was responsible for as these periods. many as 50 cases in any of these 6-month periods (table F).

Marked variations between the periods appear in the number of cases disposed of involving the three most frequent types of offenses. The number of cases charged to violations of liquor laws during the first half of 1933 (720) exceeded the number in the preceding 6 months (562) by 28 percent. In the last half of 1933 the number (316) was 56 percent less than in the preceding 6 months and 44 percent less than in the last half of 1932. During the year 1933, during each half of the year, and during the last 6 months of 1932 the majority of the cases of violation of the liquor laws occurred in the Southern States. In each of the southern divisions the number of cases was greater during January to June 1933 than in the preceding 6 months, and was smallest during the last 6 months of 1933 (table G).

¹ Includes cases of juveniles held as material witness and cases of violations of laws for each of which less than 50 cases were reported in each 6-month period.

The number of cases in which violation of the Immigration Act was charged was similarly largest in the first 6 months of 1933 and smallest during the last 6 months of that year. Arrests for violation of the Immigration Act were mainly in the West South Central States. The great majority of such cases were disposed of in Texas (table II, p. 99).

The number of cases in which violation of the Motor Vehicle Theft Act was charged was greatest in the last 6 months of 1932 (180). In the first 6 months of 1933 there were 137 cases of violation of this act compared with 97 cases in the last half of 1933. Cases of violations of this type were fairly well scattered throughout the country. The decrease in the number appears in practically all the geographic divisions.

Relatively few juveniles were arrested on account of violation of the postal laws in any of these periods. There were 62 cases in the last 6 months of 1932, 75 in the first 6 months of 1933, and 63 in the last 6 months of 1933. Cases of violations of the postal laws were scattered over the reporting area with the exception of New England and Alaska, where no arrests were reported for such violations.

Period Between Arrest and Disposition.

For approximately one-third of the cases disposed of during 1933 the period between arrest and disposition was less than a month; for two-thirds the period was less than 3 months (table H). In general, longer periods elapsed between arrest and disposition in the cases of juvenile offenders in both the first and the last half of 1933 than in the last half of 1932. Three months or more elapsed before final disposition in 20 percent of the cases in the last 6 months of 1932, as compared with 31 percent in the first 6 months of 1933, and 37 percent in the last 6 months of 1933. Forty-two percent of the cases were disposed of in less than a month in the last 6 months of 1932, 36 percent in the first 6 months of 1933, and 30 percent in the last 6 months of 1933. These differences are sufficient to be statistically significant.

¹ Less than 1 percent.

Release Pending Trial and Amount of Bail.

A more liberal policy toward the detention of these juveniles pending trial in 1933 than in 1932 is suggested by the greater percentage of juveniles not detained pending trial (table K) and the marked increase in the percentage of cases released on bail (table I). The juvenile was released pending trial in 29, 49, and 46 percent, respectively, of the cases in the three 6-month periods; the most frequent type being release on bail. In relatively few cases was the juvenile offender released in any period either on his own recognizance or on the recognizance of others.

In many cases there was no report as to bail. It is probable that bail was set but not furnished in a large proportion of these cases, because in many of them the juvenile is known to have been detained. Of the cases in which the amount of bail was reported it was \$500 or less in 57 percent of the cases for the last half of 1932, as compared with 59 percent in each half of 1933. High bail was required in many instances in each period. In 28 percent of the cases in the last half of 1932, and in 22 and 21 percent, respectively, of the cases in the first and the last half of 1933 the amount required was \$1,000. In 12 percent of the cases in 1932, 13 percent of the cases in the first half of 1933, and 15 percent in the last half of 1933 it was set at \$1,500 or more. It was \$5,000 or more in 4 cases in 1932, and in 12 and 8 cases, respectively, in the first and the last half of 1933. It was set at \$10,000 in 1 case in the last half of 1932, in 3 cases in the first half of 1933, and in 1 case in the last half of 1933. In all three periods the amount of bail set seems exceedingly high in view of the fact that none of the juveniles was over 18 years of age (table J).

Place and Length of Detention Pending Trial.

In practically all instances the juveniles who were detained pending trial were held in jail (table K). The local jail was used in 87 percent of the cases for which there was a report for the last 6 months of 1932, in 90 percent for the first 6 months of 1933, and in 82 percent for the last 6 months of 1933. Federal jails were used in 10 percent of the cases in the 1932 period and in 9 and 15 percent of the cases in the first and the last half, respectively, of 1933. Federal jails are available for use in relatively few States. In addition to Alaska and Puerto Rico, in which all jails are Federal, there are Federal jails in only four States-Louisiana, Michigan, New York, and Texas. prisoners from other States are sometimes placed in the Federal jail of a nearby State. The Federal jail in Michigan was opened in 1933, those in Louisiana and Texas in 1932, and the jail in New York was opened prior to 1932. Detention homes and other institutions were very seldom used in any of these periods, and the use of such institutions shows no general tendency toward increase.

The length of detention pending trial is shown in table L. In 37 percent of the cases in the last 6 months of 1932, 28 percent in the first 6 months of 1933, and 34 percent in the last 6 months of 1933 the period of detention was a month or more. In 6 to 9 percent of

the cases the period was 3 months or longer.

⁴ Includes 21 at \$2,500; 2 at \$3,000; 2 at \$3,500; 8 at \$5,000; 1 at \$8,000; 3 at \$10,000. 5 Includes 15 at \$2,500; 3 at \$3,000; 3 at \$3,500; 5 at \$5,000; 2 at \$7,500; 1 at \$10,000.

Disposition of Cases.

Changes have also appeared in the disposition of cases during the period under review. In the last 6 months of 1932, 33 percent of the cases were transferred to State authorities or dismissed, or the juvenile was found not guilty or fined, as compared with 31 percent in the first

6 months of 1933, and 37 percent in the last 6 months of 1933. creases were shown in the percentage of cases in which the juvenile was placed on probation during 1933. In 18 percent of the cases the juveniles were so cared for in the 1932 period, as compared with 25 and 22 percent, respectively, in the 6-month periods of 1933. Decreases were shown in the percentages committed to jails and to reformatories, prison camps, and penitentiaries. Whereas in 31 percent of the cases the juveniles were committed to jails and in 11 percent to reformatories, prison camps, and penitentiaries in the last 6 months of 1932, they were so committed in 29 percent and 9 percent, respectively, of the cases in the first 6 months of 1933 and in 25 percent and 9 percent of the cases in the last 6 months of 1933 (table M). Relatively few juveniles were committed to institutions for juveniles—only 4 or 5 percent in each 6-month period.

³ Includes 65 committed to United States jails, July 1-Dec. 31, 1932; 100, Jan. 1-June 30, 1933; 68,

Place and Term of Commitment.

The institutions to which juveniles were committed were of 3 main types: (1) jails, (2) reformatories and United States prison camps and penitentiaries, and (3) National and State training schools. 835 juveniles committed to institutions in 1933, 572 (69 percent) were committed to jails and 181 (22 percent) to reformatories and United States prison camps and penitentiaries. Only 82 (10 percent) were committed to National or State training schools that are institutions especially for juveniles. Approximately one-third of the juveniles committed to jails were to be placed on probation or to be released to immigration authorities within a short time. Definite jail sentences were imposed upon 346 juveniles; all the jail sentences were for a year or less. Approximately half of these juveniles (175) received sentences of 30 days or less, and 70 percent, 60 days or less. Juveniles committed to penal institutions other than jails and to National or State training schools generally received sentences of more than a year. For more than half of the juveniles committed to reformatories, prison camps, and penitentiaries the length of sentence was a year and a half or less. In 5 cases the juveniles were committed to these institutions for adults for the period of their minority, and 1 juvenile received a life sentence. Almost two-thirds of the 73 juveniles committed to National and State training schools for more than a year received sentences varying from 1 year and 6 months to 3 years but less than 4. Only 12 juveniles were definitely committed for their minority (table N), but the length of sentence for certain other juveniles was such that the commitment covered this period.

¹ Includes commitments to institutions followed by probation or release to immigration authorities.

A law passed in 1930 provides that persons convicted of an offense against the United States shall be committed, for such terms of imprisonment and to such types of institutions as the court may direct, to the custody of the Attorney General of the United States or his authorized representative, who shall designate the places of confinement where the sentences of all such persons shall be served.⁴

The earlier practice of the Department of Justice was to indicate to the courts the institutions to which juveniles were to be committed. Under the present method of procedure the courts send to the Department of Justice the case histories of juveniles committed to institutions for a year and a day or longer, and the Bureau of Prisons designates the institution in which the juvenile is to be placed. Records of the Bureau of Prisons show that specific designations were made for 149 juveniles during 1933.

Transfer From Federal to State Authorities.

In accordance with the policy of the Department of Justice (see p. 78) of transferring cases of juveniles from Federal to State authorities whenever the investigation indicates it to be to the best interest of the United States and the juvenile offender, 72 cases were so transferred from July to December 1932, 61 from January to June 1933, and 48 from July to December 1933. The majority of the cases transferred from January to June 1933 were of offenders over juvenile-court age, but in each of the other 6-month periods transfer of cases of juveniles of juvenile-court age exceeded the number of those over juvenile-court age (table O). During 1933, 109 cases were transferred to State authorities. The number of cases of juveniles of juvenile-court age and the number over juvenile-court age transferred to State authorities are shown for each State in table X, page 114.

Table O.—Transfer to State authorities of cases of Federal juvenile offenders of juvenile-court age and over juvenile-court age disposed of by Federal authorities, July 1-Dec. 31, 1932, and in 1933

¹ Includes 4 boys under 10 years (Alaska 3, Louisiana 1) and 1 girl under 10 years (Alaska); 2 boys of 10 years (Alaska 1, New Jersey 1); 2 boys of 11 years (Alaska 1, New Jersey 1); 5 boys of 12 years (Alabama 1, Georgia 2, Mississippi 1, Texas 1) and 1 girl of 12 years (Texas); 14 boys of 13 years (Alaska 3, and 1 in each of the following States: Alabama, Arkansas, California, Florida, Georgia, Nevada, North Carolina, South Carolina, Tennessee, Texas, West Virginia) and 4 girls of 13 years (Alaska 1, South Carolina 1, Texas 2).
² Alaska has no juvenile courts, but special procedure is provided for delinquent children under the age of 16 years.
³ Maine and Wyoming have no juvenile-court laws, but Maine in 1933 provided special procedure in cases of children under the age of 17 years, and Wyoming provides certain modifications in court procedure in cases of persons under the age of 21 years.
⁴ Under 16 years in Greenville County and in counties of 85,000 to 100,000 population; under 17 years in cities of 20,000 to 50,000 population; under 18 years elsewhere in State.

cities of 20,000 to 50,000 population; under 18 years elsewhere in State.
